

Ryan York Current Electric

Ryan has been designing and engineering residential and commercial solar for 5 years – the last 2 years with Current Electric!

As a graduate of Marquette University, he walked away with a deep connection for making the world a little better every day. Since then, he and his team work tirelessly to “spread the word on solar” to show the world what solar can do for them.

At the seminar, Ryan will present, “Photovoltaic Systems: The Safety, Simplicity, and Practicality Behind Solar.”

He plans to break down the components of a solar project, and dive into the code compliances and safety aspects. Starting simple, he will define terms and equipment, which will lead into an analysis of the **WHY**, the **HOW** and the **VALUE** behind every solar project.

Doing presentations is a passion of Ryan’s, and he enjoys interaction with his audiences, so bring your questions, comments, or any concerns to the presentation!
